

EMISSIONS INVENTORY INFORMATION
For Inventory Year - 2011
DRY CLEANING

Company Name _____ **Contact Initials** _____

Use a separate form for each machine unless the machines are identical. Please read each section, fill in all spaces, and retain a copy for your records.

I. Amount of **non-perchloroethylene** solvent used during inventory year.

Specify solvent type: _____ gallons/year: _____
Weight of clothes cleaned: _____

If perchloroethylene is not used, skip sections II, III and V, but complete section IV.

II. Calculation of perchloroethylene (perc.) emissions: Machine: _____

A. Amount Disposed: For machines not using filters or not sending still oil offsite for recycle, enter 0.

1. number of standard or split filters		x	0.25 gallons/filter	=		gallons	
2. number of jumbo filters		x	0.5 gallons/filter	=		gallons	
3. gallons of still oil		x	0.5 gallons/gallon	=		gallons	
Total gallons disposed (total = 1 + 2 + 3)					=		gallons

B. Amount Used: Estimate volumes as closely as you can.

1. volume of perc. in machine on January 1 of inventory year		=		gallons		
2. volume of perc. added to machine during inventory year		=		gallons		
3. volume of perc. in machine on December 31 of inventory year		=		gallons		
Total gallons used (total = 1 + 2 - 3)				=		gallons

C. Total Perc. Emitted

Amount Used (B) - Amount Disposed (A)		=		gallons
---------------------------------------	--	---	--	---------

III. **Annual Mileage** (pounds of clothes cleaned divided by gallons perc. used): pounds (lb.) of clothes can be obtained from your daily or weekly records for the entire year. Gallons of perc. is estimated in (C) above.

Example: 84 gallons of perc. used - 7.5 gallons of perc. disposed = 76.5 gallons of perc.
daily records show 67 lb. clothes/day x 270 days of operation = 18,090 lb./year
(18,090 lb.)/(76.5 gallons) = 236 lb. clothes/gallon perc. (mileage)

How did you estimate the weight of clothes cleaned? _____

Annual mileage = (lb. clothes)/(gal. perchloroethylene) = _____ / _____ = _____

IV. Estimate the following distances. These values will be used to estimate your facility's toxic impact on the community. **This form is incomplete without this information.** Distance from your building to the:

- Nearest residence (house or apartment): _____ feet
- Nearest off-site worksite (business, office, school, or hospital): _____ feet

V. Rule 432, Perchloroethylene Dry Cleaning Operations, requires a **current** record of completion for each trained operator for the environmental training course be sent to the District. To satisfy this requirement, please include a copy of your completion record. Current copy attached?

Yes [] No [] On record at APCD [] If no, why not? _____
